

Magic Hinge Box Pre-Measured Roller Instructions

Available at:

www.metalclay.co.uk

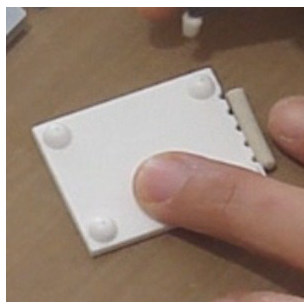

1. Make a ball of clay about the half the size of a marble.

2. Roughly shape into tube.

3. Take premeasured roller and work back and forth over clay till you have a precise snake. The small legs on bottom of roller create the thickness you need.

4. The notches at end of roller are spaced 4mm apart when measuring from center of notch. With these you can multiple hinge blanks. Also to expand hinges you would skip a notch to create 8mm blank. Place roller with notch side parallel to snake to make measured cuts
